

STANDBY GENERATOR ACCESSORIES

Wireless Generator Monitoring Kit

Air-Cooled Generator Sets

Model 5636

DESCRIPTION

The Wireless Generator Monitoring System provides remote monitoring capability for convenient indoor observation. By adding this item a generator owner can observe generator function, set certain operation parameters and receive maintenance reminders. The kit includes the wireless transmitter, wire harness connection, remote monitor display unit, 120V AC plug and 3 AAA batteries. The addition of battery back-up ensures lasting operation.

***This system is only compatible with 10-20kW air-cooled models that utilize the digital control panel. It is not compatible with liquid-cooled models.**

PROVIDED FUNCTIONS

- Permanent time/date stamped history of generator events such as starting and stopping
- Display generator faults and warnings
- Display successful generator start and transfer
- Allows for remote starting and stopping of the generator
- Remote setting of exercise time and day
- Offers the ability to monitor voltage and frequency
- Offers the facility to adjust acceptable voltage thresholds.
- Set maintenance intervals and reminders
- Graphing capability for trending of engine RPM, Voltage and Battery Voltage
