

# GENERAC® GENPAD LC™

## USING THE GENPAD LC WITH A 22-30kW GAS GENERATOR

While the GenPad LC is made specifically to fit the frame of 32-60kW gas generators, it can also readily accommodate the smaller frame of 22-30kW units. Here, see an overlay which shows the two frames aligned atop the GenPad LC.

The smaller frame is only marginally less wide than that of the 32-60kW unit, meaning that the provided mounting clips will secure the generator frame onto the GenPad LC.

Rather than centering the installation, line up the generator frame so that the GenPad LC's knockout aligns with where conduit will be run. This will leave an apron of approximately 17" at one end.

By installing in this way, existing mounting hardware and concrete knockouts can be utilized without physically altering or damaging the pad.
