**NOTE:**
The recommended distance from a structure is dependent on the type and size of the structure. Consult local codes and ensure compliance with NFPA 37 Section 4.1.1 to 4.1.2. A third-party test facility may require additional information.

For installations near non-combustible or 1-hour fire-rated structure, a minimum distance of 10' is required to ensure proper generator cooling.

**AERIAL:**
1. Exhaust is always away from parallel to structure.
2. Exhaust is not directed at flat areas, rooftops, or other areas where people congregate.
3. The nearest window, vent, door, or similar structure opening is at least 5 feet from the exhaust end of the set.
4. Set is properly offset from structure.
5. Windows & doors on adjacent walls are closed.
6. Surfaces and other similar intakes are at least 10 feet from exhaust end of set.
7. Needs support and 3-inch-thick gravel base or concrete pad to prevent grass & weeds from growing too close to the set.
8. No plants, shrubs, or other combustibles allowed in clearance area (minimum 4 ft. from exhaust end).
9. Refer to owner's manual for other installation constraints.
10. No plants, shrubs, or other combustibles allowed within 30' of air intake.
