

**OPERATION:**

**Fully Automatic** - Upon engine start, meter shows engine RPMs in sampled increments (some meters). At engine shut down, meter displays total accumulated running time. Flash Alert alarms will flash automatically for a 2 hour period (2 hours of engine run time) at the preset service intervals, as a service reminder.

**INSTALLATION:**

1. Find a convenient mounting location. Be sure the pick-up wire will reach the spark plug wire. If not, substitute with a wire of the same outside diameter of no less than 22 gauge, up to 8 feet long. **DO NOT** mount meter where surface temperature exceeds 125°F. As a general guideline, if you can place your hand on the mounting surface without discomfort while equipment is at full operating temperature, then it will be suitable to mount meter in that location.
2. Use drill template (Fig. 1) to locate mounting holes. **DO NOT DRILL INTO GAS TANKS OR ENGINE CRANKCASE.** If in doubt, contact your dealer.
3. Secure pick-up wire into meter by placing wire over channel and pushing down with a flat screwdriver. Wire must be seated completely in channel (see Fig. 2). Fasten meter to mounting surface with supplied screws. Route meter wire to spark plug wire and attach as shown in Figure 3.
