INTRODUCTION (

Congratulations on your purchase of your new Yamaha.

This manual will provide you with a good basic understanding of the operation and maintenance of this machine.

If you have any questions regarding the operation or maintenance of your machine, please consult a Yamaha dealer.

IMPORTANT MANUAL INFORMATION

Particular vimportant information is distinguished in this manual by the following notations.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠ WARNING

A WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

NOTICE

A NOTICE indicates special precautions that must be taken to avoid damage to the machine or other property.

TIP

A TIP provides key information to make procedures easier or clearer.

OCEL. A MA BOT CORDINATION U.S.A. R. SOS CO.D. Dealer Principalises Sto.)

♠ WARNING

PLEASE READ AND UNDERSTAND THIS MANUAL COMPLETELY BEFORE OPERATING THE MACHINE.

TIP

- · Yamaha continually seeks advancements in product design and quality. Therefore, while this manual contains the most current product information available at the time of printing, there may be minor discrepancies between your machine and this manual. If there is any question concerning this manual, please consult a Yamaha dealer.
- This manual should be considered a permanent part of this machine and should remain with this machine when resold.
- * Product and specifications are subject to change without notice.

Ta to Sanaha Mod

Exhaust fumes are poisonous

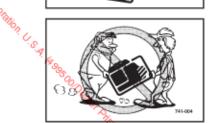

- Using a generator indoors CAN KILL YOU IN MINUTES. Generator exhaust contains carbon monoxide. This is a poison you cannot see or smell.
- NEVER use inside a home or garage, EVEN IF doors and windows are open.
- Only use OUTSIDE and far away from windows; doors, and vents.

Fuel is highly flammable and poisonous

- Always turn off the engine when refuelling.
- Never refuel while smoking or in the vicinity of an open flame.
- Take care not to spill any fuel on the engine or muffler when refuelling.
- Do not leave the generator inside the vehicle or in the trunk.
- If you swallow any fuel, inhale fuel vapor, or allow any to get in your eye(s), see your doctor immediately. If any fuel spills on your skin or clothing, immediately wash with soap and water and change your clothes.
- When operating or transporting the generator, be sure it is kept upright. If it tilts, fuel may teak from the carburetor or fuel tank.

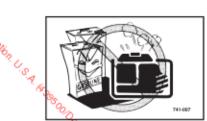

Engine and muffler may be hot

 Place the generator in a place where pedestrians or children are not likely to touch the generator.

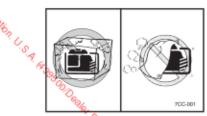

Me bor Cornolation, U.S.A. Rogs.

 Avoid placing any flammable materials near the exhaust outlet during operation.

 In order to prevent overheating, ensure adequate airflow by keeping the machine at least 1 m (3/1) from objects or other equipment.

 Do not operate the engine with a dust cover or other objects covering it.

 When covering the generator, be sure to do so only after the engine and muffler have completely cooled down.

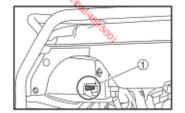

Electric shock prevention

· Never operate the engine in rain or snow.

On U.S.A

 Never touch the generator with wet hands or electrical shock will occur.

 Connect the ground (earth) terminal to a ground source. In order to prevent electrical shock, the generator must be grounded when using a grounded electrical device.

Corporation U.S.A. Magas.

1 Ground (earth) terminal

Connection notes

- San in Samalia Motor Q Avoid connecting the generator to commercial power outlet.
- Avoid connecting the generator in parallel with any other generator.
- Correct
- (2) Incorrect

Connection

Before the generator can be connected to a building's electrical system, a licensed electrician must install an isolation (transfer) switch in the building's main fuse box. The switch is the connection point for generator power and allows selection of generator or main line power to the building. This will prevent the generator from charging the main power line (backfeeding) when the main power supply has failed or has been turned off for line repair. Backfeeding can electrocute or injure line maintenance personnel. Also, generator and building electrical system damage can occur when normal operating power returns if unit is used without an isolation switch.

Extension cord notes

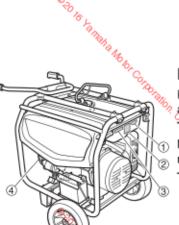

Extension cords should be protected by a tough flexible rubber sheath (IEC 245) or the equivalent to withstand mechanical stresses.

B Supplies AC 120 V and 240 V

NOTICE

Reduce the load to the specified generator rated output if the AC switch (N.F.B.) turns off. If it turns off again, consult a Yamaha dealer.

Fuel tank cap

gen Vallalla Maker Coltolar Remove the fuel tank cap by turning it counterclockwise.

Fuel cock

The fuel cock supplies fuel from the fuel tank to the carburetor.

The fuel cock has two positions.

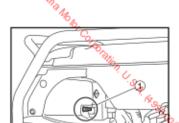

(P)ON

With the lever in this position, fuel flows to the carburetor. Normal using is done with the lever in this position.

OFF

With the lever in this position, fuel will not flow. Always turn the lever to this position when the engine is not running.

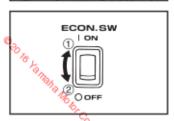

-9-

Ground (earth) terminal

Tax to Ya Raha Me tor Corto Ration Make sure to ground (earth) the generator. Check "SAFETY INFORMATION" (See page 3).

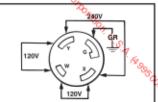

1 Ground (earth) terminal

Economy control switch

(NO)"|" (DN)

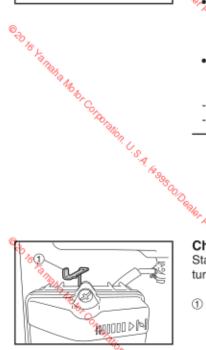

When the economy control switch is turned to "I" (ON), the economy control unit controls the engine speed according to the connected load. The results are better fuel consumption and less noise.

@ "O" (OFF)

When the economy control switch is turned to "O" (OFF), the engine runs at the rated r/min (3600 r/min) regardless of whether there is a load connected or not.

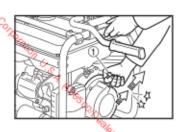

- The economy control switch must be turned to "O". (OFF) when using electric devices that require a large starting current, such as a compressor or a submersible pump.
- The economy control switch must be turned to "O" (OFF) to increase engine speed to rated remin when:
- using a load of 0.8 A or less.
- supplying AC 120 V only from W with X.

Choke lever (For EF5500D)

Starting a cold engine requires a richer air fuel mixture, which is supplied by the choke lever.

Choke lever

Recoil starter

The recoil starter is used to start the engine.

Pull the recoil starter slowly until it is engaged, then pull it briskly.

G.F.C.I. receptacle

TO REDUCE THE CHANCE OF ELECTRICAL SHOCK:

Tax to Ya Maha Mobir Co.

- Do not attempt to operate electric devices if the ground fault circuit interrupter reset button pops out repeatedly during use.
- · Test the ground fault circuit interrupter during the pre-operation checks according to the maintenance instructions on page 43.
- Remember that only receptacle labeled "GFCI" have ground fault circuit interrupter protection.

The G.F.C.I. (Ground Fault Circuit Interrupter) shuts off power to the protected receptacles if a ground fault (electrical leak) is detected.

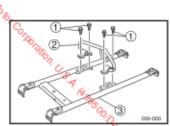

If the reset button pops out, the electric devices connected into the receptacle may be faulty. If this happens, check the electric devices carefully. If the electric devices appears to be in good condition, press the reset button firmly until a click is heard. This will restore power. If the reset button pops out again, disconnect all the electric devices immediately. Have the electric devices inspected and repaired by a qualified repairperson before attempting to use them again.

Fyel WARNING

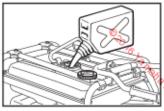

- Fuel is highly flammable and poisonous. Check "SAFETY INFORMATION" (See page 2) carefully before filling.
- . Do not overfill the fuel tank, otherwise it may overflow when the fuel warms up and expands.
- Wipe up any spilled fuel immediately.
- After filling the tank with fuel, make sure the fuel tank cap is tightened securely.

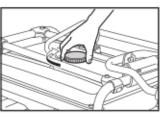

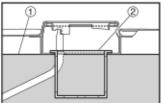

- 2. Place the generator on a level surface.
- Remove the fuel tank cap.
- 4. Check the fuel level.
- 5. If low, fill the tank with fuel.

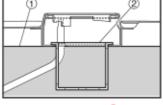

NOTICE

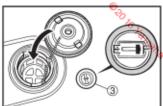

- Immediately wipe off spilled fuel with a clean, dry, soft clothesince fuel may deteriorate painted surfaces or plastic parts.
- Use only unleaded gasoline. The use of leaded gasoline will cause severe damage to internal engine parts.

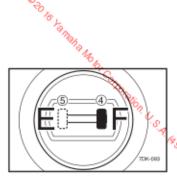

Make sure there is sufficient fuel in the tank.

When refueling, do not fill the tank up above the top edge of the fuel tank filter.

- Fuel level
- ② Fuel tank filter
- ③ Fuel level gauge

Recommended fuel:

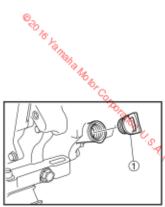

Unleaded gasoline

Fuel tank capacity:

Total:

26 L (6.87 US gal, 5.72 Imp gal)

Your Yamaha engine has been uesigned and unleaded gasoline with a pump octane number ((R + M)/2) of 86 or higher, or research octane number of or higher.

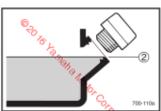

Engine oil

Make sure the engine oil is at the correct level of the oil filler hole.

©30 IS YOUR SHOOT COLD

- Oil filler cap

PRE-OPERATION CHECK

⚠ WARNING

If any item in the pre-operation check is not working properly, have it inspected and repaired before operating the generator.

The condition of a generator is the owner's responsibility. Vital components can start to deteriorate quickly and unexpectedly, even if the generator is unused.

TIP _

Pre-operation checks should be made each time the generator is used.

Pre-operation check Fuel (See page 18)

- Check fuel level in fuel tank.
- Refuel if necessary.

Fuel line

- · Check fuel hose for cracks or damage.
- Replace if necessary.

Engine oil (See page 19)

- Check oil level in engine.
- If necessary, add recommended oil to specified level.
- Check generator for oil leakage.

The point where abnormality was recognized by use

- Check operation.
- If necessary, consult a Yamaha dealer.

Application range

When using the generator, make sure the total load is within rated output of a generator. Otherwise, generator damage may occur.

AC Agg	*		1
Power factor	1	0.8-0.95	0.4-0.75 (Efficiency 0.85)
EF5500DE EF5500D	4500 W	−3600 W 🧠	−1530 W

- "—" means below.
- Application wattage indicates when each device is used by itself.

NOTICE

- Do not overload. The total load of all electrical appliances must not exceed the supply range of the generator. Overloading will damage the generator.
- Some types of precision equipment such as electronic controllers, PCs, electronic computers, microcomputer-based equipment and battery chargers are sensitive to voltage fluctuations and may require more stable voltage supply than the voltage supplied from the portable generator.

When using such equipment, consult with a Yamaha dealer.

- When supplying precision equipment, electronic controllers, PCs, electronic computers, microgenerator a sufficient distance away to pure engine. Also ensure that electrical noise from the engine with any other electrical devices located near the generator.

 The generator is to supply medical equipment, advice electric in the generator is to supply medical professional or him to computers, microcomputer-based equipment or battery chargers, keep the generator a sufficient distance away to prevent electrical interference from the engine. Also ensure that electrical noise from the engine does not interfere
 - If the generator is to supply medical equipment, advice should first be obtained from the manufacturer, a medical professional or hospital.
 - Some electrical appliances or general-purpose electric motors have high starting currents, and cannot therefore be used, even if they lie within the supply ranges given in the above table. Consult the equipment manufacturer for further advice.

TO 16 Ya Maha Mo PERIODIC MAINTENANCE

Safety is an obligation of the owner. Periodic inspection, adjustment and lubrication will keep your generator in the safest and most efficient condition possible. The most important points of generator inspection, adjustment, and lubrication are explained on the following pages.

 WARNING

If you are not familiar with maintenance work, have a Yamaha dealer do it for you.

Maintenance chart

WARNING

Stop the engine before starting maintenance work.

NOTICE

Use only Yamaha specified genuine parts for replacement. Ask an authorized Yamaha dealer for further attention.

Carburetor adjustment

The carburetor is a vital pr

left to a Yamaha The carburetor is a vital part of the engine. Adjusting should be left to a Yamaha dealer with the professional knowledge, specialized data, and equipment to do so properly.

Spark plug inspection

The spark plug is important engine components, which should be checked periodically.

- Remove the spark plug cap and the spark plug.
- Spark plug cap
- Spark plug
- 25 Check for discoloration and remove the carbon. The porcelain insulator around the center electrode of spark plug should be a medium-to-light tan color.
- Check the spark plug type and gap.

Standard spark plug: BPR4ES (NGK) Spark plug gap: 0.7-0.8 mm (0.028-0.031 in)

Spark plug gap

TIP _

© do la Yanaha Ma, The spark plug gap should be measured with a wire thickness gauge and, if necessary, adjusted to specification

Install the spark plug.

Spark plug tightening torque: 20 Nm (2.0 mkgf, 14 ft-lbf)

TIP ____

If a torque wrench is not available when installing a spark plug, a good estimate of the correct torque is 1/4-1/2 turn past finger tight. However, the spark plug should be tightened to the specified torque as soon as

Install the spark plug cap.

T/4should be possible.

₩ WARNING

Avoid draining the engine oil immediately after stopping the engine. The oil is hot and should be handled with care to avoid burns.

Remove the oil filler cap.

 Place an oil pan under the engine. Remove the oil drain bolt so that the oil can be completely drained.

 Check the oil drain bolt, oil filler cap and O-ring. Replace them if damaged.

Oil drain bolt

② Gasket

③ O-ring

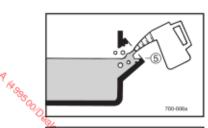

(4) Oil filler cap

5. Install a new gasket and the oil drain bolt, and then tighten the bolt.

Battery (For EF5500DE)

Tanaha Maha Mator (This generator is designed to be equipped with a VRLA (Valve Regulated Lead Acid) battery. There is no need to check the electrolyte or to add distilled water.

To charge the battery

Have a Yamaha dealer charge the battery as soon as possible if it seems to have discharged.

NOTICE

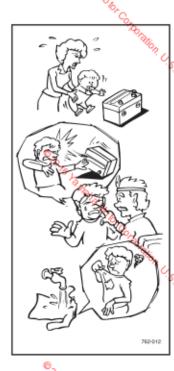

To charge a VRLA battery, a special (constant-voltage) battery charger is required. Using a conventional battery charger will damage the battery. If you do not have access to a constant-voltage battery charger, have a Yamaha dealer charge vour battery.

⚠ WARNING

- Electrolyte is poisonous and dangerous since it contains sulfuric acid, which causes severe burns. Avoid any contact with skin, eyes or clothing and always shield your eyes when working near batteries. In case of contact, administer the following FIRST AID.
 - EXTERNAL Flush with plenty of water.
 - INTERNAL: Drink large quantities of water or milk and immediately call a physician.
 - . EYES: Flush with water for 15 minutes and seek prompt medical attention.
- Batteries produce explosive hydrogen gas. Therefore, keep sparks, flames, cigarettes, etc., away from the battery and provide sufficient ventilation when charging it in an enclosed space.
- KEEP THIS AND ALL BATTERIES OUT OF THE REACH OF CHILDREN.

Recommended battery (For EF5500DE)

Tan Po Tanaha Mobi Corbolelle Long term storage of your generator will require some preventive procedures to guard against deterioration.

Drain the fuel

Turn the engine switch to "\(\bigcirc\)" (STOP).

Remove the fuel tank cap and fuel tank filter. Extract the fuel from the fuel tank into an approved gasoline container using a commercially available hand siphon. Then, install the fuel tank filter and the fuel tank cap.

⚠ WARNING

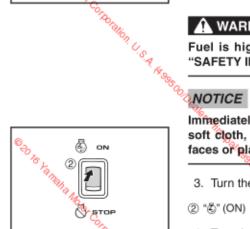

Fuel is highly flammable and poisonous. Check "SAFETY INFORMATION" (See page 2) carefully.

Immediately wipe off spilled fuel with a clean, dry, soft cloth, since fuel may deteriorate painted surfaces or plastic parts.

- Turn the engine switch to "
 "(ON).
- ② "忍" (ON)
- Turn the fuel cock lever to ON.
- ③ ON
 - Start the engine and leave it run until it stops. The engine stops in approximately 20 minutes time by running out of fuel.

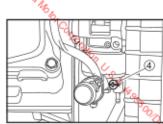

- Do not connect with any electrical devices. (unloaded operation)
- Duration of the running engine depends on the amount of the fuel left in the tank.

©30 IS Yangha Motor Corporation U.S.A. 48.988.

- Drain the fuel remaining in the carburetor into approved container by loosening the drain screwburefor float chamber. Drain the fuel remaining in the carburetor into an
- (4) Drain screw
- Tighten the drain screw.
- Turn the engine switch to "√" (STOP).
- Turn the fuel cock lever to OFF.
- Tighten further if any screws, bolts and puts are
- loose.

 11. Store the generator in a dry, well-ventilated place the cover placed over it.

Engine

Perform the following steps to protect the cylinder, piston ring, etc. from corrosion.

- 1. Remove the spark plug, pour about one tablespoon of engine oil (See page 35) into the spark plug hole and reinstall the spark plug only. Recoil start the engine by turning over several times (with ignition off) to coat the cylinder walls with oil.
- 2. Pull the recoil starter until you feel compression. Then stop pulling. (This prevents the cylinder and valves from rusting.)
- 3. Clean exterior of the generator and apply a rust inhibitor.
- Store the generator in a dry, well-ventilated place, with the cover placed over it.
- The generator must remain in a vertical position when stored, carried or operated.

Battery (For EF5500DE)

W. R.S. SOO,

- Remove the battery.
- charge it once a month. Do not store use charge it once a month. Do not store use charge in an excessively warm or cold place [i.e., less of 0.00 (32 °F) or more than 30 °C (86 °F)]. 2. Store the battery in a cool, dark and dry place and

WARNING

- Disconnect the negative lead (Black) first, then the positive lead (Red) from the battery.
- San Its Yamaha Maker Cornolation U.S.A. Connect the positive lead (Red) first, then the negative lead (Black) to the battery when installing the battery.

YAMAHA EXTENDED SERVICE (Y.E.S.)

Keep your Yamaha Generator protected even after your warranty expires with genuine Yamaha Extended Service (Y.E.S.).

Tat 16 Yangha Mober

- Y.E.S. is designed and administered by Yamaha Motor Corporation to provide maximum owner satisfaction You get uninterrupted factory-backed coverage for extra peace of mind.
- Y.E.S. is flexible. You can choose the plan that's right for you: 12 months, 24 months or 36 months coverage.
- Y.E.S. is administered by the same Yamaha people that handle your warranty and it shows in the comprehensive coverage benefits. There are no hour limitations and Y.E.S. covers manufacturing defects just like your warranty. See a sample contract at your Yamana dealer and see how comforting uninterrupted factory backed protection can be.
- There are no "out-of-pocket" expenses for covered repairs. Yamaha will never ask you to pay a deductible.
- Nationwide coverage. Y.E.S. coverage is honored at any authorized Yamaha Quidoor Power Equipment Service dealer.
- Y.E.S. coverage is transferable to a new owner if you sell or trade-in. That can make you yamaha much more valuable.

This excellen (X.E.S. plan coverage is only available to Yamaha owners like you, and only while your Yamaha is still within the Yamaha Limited Warranty period. So visit your authorized Yamaha dealer to get all the facts. He can show you how easy it is to protect your investment with Yamaha Extended Service.

Special note:

If visiting your dealer isn't convenient, contact Yamaha with your Primary ID number (machine serial number). We'll be happy to help you get the Y.E.S. coverage you need.
